

BREATHE - TECHNICAL REQUIREMENTS

- The installation is mounted on a 5 meters long, 2,10 meters wide trailer.
- The whole object weighs 1800kgs.
- The surface where the object will be installed has to be at least 9 meters x 5 meters, flat, regular and levelled as much as possible.
- The installation requires 3000W of electrical supply. This has to be fulfilled also for building it up and dismantle, moment in which we use motors for the setup.
- We need full vehicular access to the location in order to transport the trailer, and a parking possibility to leave our transporter during the event.

Set up - 1 day

Dismantle - 1 day

The object is 100% waterproof and suitable for outdoors.

Security supervision is required at all times, from the arrival of the material until the final packing, unless the installation is mounted in a closed area. We strongly recommend that the organisation provides a method to keep the trailer out of reach of the audience.

Our team is composed of 2 people. We will require 2 single rooms during the whole duration of the event, including set up and dismantle. Food is either provided by the organiser or has to be included in our calculations.
