

## Technical requirements:

- Space that can be darkened or dimly lit.
- Height 4 mts. / Width 4 mts. / Depth 6 mts. (minimum)
- Black background (Height 2,5 mts. / Width 4 mts.)
- Screen and beamer with VGA input and VGA cable

## Space usage:

- Space that can be darkened or dimly lit.
- Height 4 mts. / Width 4 mts. / Depth 6 mts. (minimum)
- Black background (Height 2,5mts. / Width 4mts.)

Because of **Firewire** cable length limitations, the computer must be placed not more than 10 mts. away from the camera. Having this in consideration, the **VGA** cable that connects the computer to the beamer/s must be long enough to reach the computer's location.

## Screen location:

It is very important to have a black background for the success of the video processing. Having this in mind, we show in the diagram the best positions for the screen.
